

INTRODUCTION

- Disease Prediction Using Machine Learning Is A Healthcare System That Predicts The Possibility Of Diseases Using Patient Health Data.
- It Analyzes Information Such As Age, Symptoms, And Medical History To Identify Disease Patterns.
- Machine Learning Algorithms Provide Fast And Accurate Predictions, Helping Doctors With Early Diagnosis And Better Treatment Decisions.
- This Technology Improves Healthcare By Supporting Timely And Efficient Disease Detection.
- Early Disease Prediction Enables Timely Diagnosis And Treatment, Reduces Healthcare Costs And Improves Patient Outcomes.
- In This Project, Patient Data Is Collected And Preprocessed, A Machine Learning Model Is Trained Using Historical Medical Records, And The Trained Model Is Used To Predict The Likelihood Of A Disease For New Patients.
